

HS Mind Mapper

A local, private mind-mapping tool. What it is, how it was thought through, how to use it.

1 What it is

One HTML file. Double-click it and you have a mind-mapping app in your browser. No install, no login, no server.

Sample map: Rule 11UA and Section 50C of the Income-tax Act, shown as a tree.

What you are looking at

Central idea

The teal node in the middle is the topic. Every branch grows from it.

Coloured branches

Each main branch gets its own colour. Sub-branches inherit it in lighter shades.

Notes on every node

Each idea can hold a short or long note: a formula, an example, a reference.

Sample map

The demo opens on Rule 11UA and Section 50C so a new viewer sees a working example at once.

At a glance

Item	Detail
Type	Single HTML file, about 66 KB
Works in	Chrome, Edge, Firefox, Safari
Needs	Nothing to install. Internet only for PNG/PDF export, first time
Data	Stays in your browser

2 How it was thought through

Reconstructed as a builder would reason, working from the finished tool. No code here, only the decisions.

Step	Thinking
1. The problem	I teach and advise on topics with many linked parts, such as valuation methods or tax provisions. Linear notes hide how the parts connect. A mind map shows the whole picture on one screen. Existing tools are online, subscription-based and store data on someone else's server.
2. The constraints	Client and course material is confidential, so nothing may leave the computer. It must be easy to hand to a colleague, so no installation. It must look professional, so a consistent teal and orange palette runs through the design.
3. The core idea	Treat a map as a small tree of ideas: each idea knows its parent, position, colour and note. If that structure is right, everything else (drag, collapse, colour, export) is a change to the tree. One file, saved in the browser, keeps it simple.
4. Build order	First the data and saving, so maps survive a refresh. Then show ideas on a canvas and connect them with lines. Then the moves that make it feel like a mind map: add a branch, drag to re-parent, collapse, promote and demote. Styling and export come last, once the structure is stable.
5. Small choices that matter	New main branches get a distinct colour, and sub-branches get a lighter tint of it, so the eye can follow a branch. Deleting a node asks first, because it removes everything below it. Notes are hidden by default so the map stays clean, and can be shown all at once.
6. Test and refine	Try it on real content, then fix what feels awkward. For the demo, a real map on Rule 11UA and Section 50C was loaded and checked on screen for overlaps and readability.

Why single-file and local?

The same choice gives privacy (nothing to upload), portability (email it), and durability (no service to shut down). The cost is that data lives in one browser, which is why export exists.

3 How to use it

Four steps to a first map, then the controls.

Toolbar: zoom, show all notes, expand all, collapse all, export, close map, delete map.

Action	How
Add an idea	Double-click empty canvas, or click + on a node to branch off it
Edit text	Click the text, type, press Enter
Move / re-parent	Drag a node. Drop it on another node to make it that node's child
Collapse / expand	Click the minus handle on a node, or use Collapse all / Expand all
Promote / demote	Use the level buttons on a node to move it up or down a level
Add a note	Open the note on a node and write any length of text. Saved with the map

Action	How
Style	Palette icon: brand colours, full spectrum, custom colour, four fonts, three sizes, bold, italic
Zoom	Minus and plus in the toolbar, or click the percentage to reset
Delete	X on a node removes it and its branches, after a confirmation

4 Outputs

Export menu on the toolbar. Choose what fits where the map is going.

PNG image

A picture of the whole map. Best for slides, documents and chats.

PDF

The whole map as one PDF page. Best for sharing and printing.

Notes document

All ideas and notes laid out as a printable document. Best as a handout or study sheet.

JSON data

The full map as a data file. Best as a backup or to move a map between computers.

Where each output goes

Output	Use it for	Note
PNG	Slides, reports, WhatsApp	Needs internet the first time (export library)
PDF	Email, print, review copy	Needs internet the first time (export library)
Notes document	Lecture handout, revision sheet	Opens as a print page; save as PDF from the print dialog
JSON	Backup before clearing the browser	Import back into the tool is not built yet

5 Data safety

Built so confidential material does not leave the computer.

No upload

Maps are stored inside the browser on your own computer. The tool has no server and sends nothing out.

No account

There is no sign-up, login or tracking. Nobody else can open your maps.

Sharing the file is safe

The file holds the tool, not your data. Someone who receives it starts with only the sample map.

Your responsibilities

Data sits in one browser. Clearing site data erases it, so export JSON as a backup. Use a private profile on shared computers.

6 Use cases

Wherever ideas need structure before they become a document, a lecture or a decision.

Course design

Map a module from topic to sub-topic, attach formulas and examples as notes, export a handout.

Tax and law explainers

Break a provision into who, when, how much and exceptions, as in the Rule 11UA and Section 50C sample.

Valuation engagement scoping

List approaches, data needed, assumptions and deliverables before the engagement starts.

Report outlines

Build the structure of a valuation or advisory report, then reorder sections by dragging.

Exam revision

Turn a chapter into a map. Collapse what is learned and focus on what is not.

Meetings and brainstorming

Capture ideas live, group them into branches, export a picture for the minutes.

Example: the sample map on Rule 11UA and Section 50C

Branch	What it covers
Why these rules exist	Anti-avoidance; stamp duty value; fair market value
Section 50C: Seller	Deemed sale price, 10% safe harbour, which date, disputes
Section 56(2)(x): Buyer	Free receipt, inadequate consideration, other property, exemptions
Rule 11UA: FMV method	Immovable property, quoted and unquoted shares, formula
Worked example	Rs 80 lakh plot with two SDV cases, seller and buyer effect
Compliance tips	Check SDV, fix the date, valuation officer, keep reports

7 Limits and next steps

Today	Possible next step
Data lives in one browser on one device	Add JSON import to move maps between devices
No sync or real-time collaboration	Only if a shared version is ever needed
Showing all notes at once can make dense maps overlap	Auto-spacing when notes are shown
Built for mouse and keyboard	Touch support for tablets

The sample map uses Income-tax Act, 1961 numbering and is illustrative learning content, not tax advice. Verify current law before relying on it.
