How to Record Your Voice for the TreasuryAudit360 Demo

Step-by-step guide: adding your own live narration to the demo video

Workflow automation for audit of the Treasury department of a bank in India

Regulatory coverage: RBI | SEBI | IFSCA (GIFT City) | FEMA

Auditing framework: ICAI Standards on Auditing and Standards on Internal Audit

Platform: n8n Cloud | Claude (Anthropic) | Google Sheets | Gmail | Lovable

Capstone project submitted by: **CA Ravishankar Balakrishnan Aiyar**

Membership No.: **040524**

Batch: **AIL2B105**

Date: **30 October 2026**

What you have:

- `TreasuryAudit360_Demo.mp4`: a 6 min 12 s silent video with 38 slides.
- `TreasuryAudit360_Demo.pptx`: the same slides, with what to say in the speaker notes.
- `Narration_Script.pdf`: a timed script.

What you will make: one video with your voice explaining the app, ready to submit.

1. Choose your method

Method	Best for	Tool (free)
A. Voice-over in Clipchamp (recommended)	Talking over the finished MP4 video	Clipchamp (built into Windows 11)
B. Record slide by slide in PowerPoint	Pausing and re-recording one slide at a time; easiest to correct mistakes	Microsoft PowerPoint
C. Live screen recording	Showing the real app working (running an audit) while you talk	Xbox Game Bar or Snipping Tool (built into Windows 11)

Most students use **B** for the full presentation and add a short **C** clip of a live audit run. If you want the quickest result, use **A**.

2. Before you record (10 minutes)

1. **Quiet room:** close windows and doors, switch off fans or AC, and put your phone on silent.
2. **Microphone:** a wired earphone or headset mic is better than the laptop's built-in mic. Keep it about two fingers' width from your chin, slightly to the side.
3. **Check the microphone works:**
   - Open **Settings → System → Sound → Input**.
   - Select your microphone and speak. The volume bar should move to about the middle.
   - If the bar doesn't move, open **Settings → Privacy & security → Microphone** and turn on *Microphone access* and *Let desktop apps access your microphone*.
4. **Print or open `Narration_Script.pdf`.** It lists, slide by slide, what to say and at what time.
5. **Rehearse once aloud.** Each slide gives you 6–14 seconds; speak calmly and don't rush.
6. **Close notifications:** turn on **Do not disturb** (click the clock in the taskbar → bell icon), and close WhatsApp, Outlook and Teams.

3. Method A – Voice-over with Clipchamp (recommended)

1. Click **Start**, type **Clipchamp** and open it. If asked, sign in with your Microsoft account.
2. Click **Create a new video**.
3. Click **Import media** and choose `Desktop\TreasuryAudit360\Demo_Video\TreasuryAudit360_Demo.mp4`.
4. Drag the video from *Your media* down onto the **timeline**.
5. In the left menu click **Record & create**, then **Audio**.
6. Allow microphone access when the browser asks. Check the correct microphone is selected (click the arrow next to it).
7. **Record in parts, not all at once.** This makes mistakes easy to fix:
   - Click the red **Record** button and speak the first 4–5 slides from the script, then click **Stop**.
   - Click **Save and edit**. The recording appears on a new audio track under the video.

- Drag the audio clip so it starts at the right time. Use the timings in the narration script and the timeline's time marker.
- Repeat for the next group of slides.

8. **Fix mistakes:** click an audio clip and press **Delete**, then record that part again. To cut part of a clip, place the playhead and press **S** (split), then delete the unwanted piece.
9. **Volume:** click the audio clip, then **Audio** in the right panel. Keep the volume at 100–150% so your voice is clear.
10. **If you need more time on a slide:**
    - Click the video, move the playhead to the end of that slide and press **S** to split.
    - Hover over the clip and click **Freeze frame**, or simply let your audio run longer and trim the end.
11. Click **Play** and watch the whole video once with your voice.
12. Click **Export** (top right), choose **1080p** and wait. The file saves to your **Downloads** folder, for example `TreasuryAudit360 Demo.mp4`.

4. Method B – Record slide by slide in PowerPoint (easiest to correct)

1. Open `Desktop\TreasuryAudit360\Demo_Video\TreasuryAudit360_Demo.pptx` in PowerPoint.
2. Click the **Record** tab (or **Slide Show → Record**), then **From Beginning**.
3. In the recording window:
    - top right ⚙ **Settings / microphone icon**: choose your microphone
    - camera icon: turn your **camera on** if you want your face in the corner (many evaluators like this), or off for voice only
    - **Notes** at the top: shows the "Say:" text for every slide while you record
4. Click the round red **Record** button. A 3-2-1 countdown starts.
5. Speak the slide, then press the **right arrow key** (→) to move to the next slide. Take your time; each slide records its own length.
6. **Made a mistake?** Press **Stop**, go back to that slide with ← and click **Clear → Clear recording on current slide**. Record just that slide again.
7. Press **Esc** when finished. Each slide now shows a small speaker (and camera) icon.
8. **Make the video:**
    - Go to **File → Export → Create a Video**.
    - Choose **Full HD (1080p)** and **Use Recorded Timings and Narrations**.
    - Click **Create Video** and save it as `TreasuryAudit360_Demo_with_voice.mp4`.
    - Watch the progress bar at the bottom of PowerPoint; it takes a few minutes.

5. Method C – Record the live app (screen + voice)

Use this for a 1–2 minute live segment, for example running an audit and submitting a management response.

Option 1: Xbox Game Bar (records one app window)

1. Open the app in your browser: https://treasuryaudit360.lovable.app (or your GitHub Pages version), full screen (**F11**).
2. Press **Win + G** to open Game Bar. In the *Capture* widget, click the **microphone** icon so it is on, or press **Win + Alt + M** during recording.
3. Press **Win + Alt + R** to start recording. Talk while you:
    - open **Run Audit**, enter your name and click **Run Audit**
    - explain the stages while it runs

- show the result, the **Audit Report**, and the **Findings Register**
- open finding **TD006**, enter a management response and click **Submit**

4. Press **Win + Alt + R** again to stop. The video is saved in **Videos → Captures**.

Option 2: Snipping Tool (records any part of the screen)

1. Press **Win + Shift + R**.
2. Drag to select the area, switch the **microphone** on in the toolbar, and click **Start**.
3. Click **Stop** when done, then **Save**.

Android app on your phone (optional):

1. Install `TreasuryAudit360.apk` on your phone.
2. Use the phone's built-in **Screen recorder**: swipe down twice and tap *Screen recorder*. Choose *Media and microphone*.
3. Show the app opening, the dashboard and the findings.

Combine the clips: in Clipchamp, import your live clip(s) and drag them onto the timeline after the "Step 1 Dashboard" slide, or wherever they fit. Then export as in Method A.

6. Speaking tips for a professional delivery

1. **Open with:** "Good morning. I am CA Ravishankar Balakrishnan Aiyar, Membership No. 040524, Batch AIL2B105. My capstone is TreasuryAudit360, an automated audit of a bank's treasury…"
2. **Explain the "why" before the "what"** on each screen. For example: "Regulators expect independent confirmation of every deal, so test TR-01 checks…"
3. **Use the key terms clearly:**
   - CAAT and 100% population testing
   - RBI, SEBI, IFSCA, FEMA
   - SA 230, SA 265, SA 315, SA 330, SA 530, SIA 370
   - deterministic rules decide findings; AI only drafts the narrative
4. **Speed:** about 130 words a minute. Pause briefly at each slide change.
5. **Tone:** formal, as if presenting to an Audit Committee.
6. **Close with:** benefits, limitations (data quality, AI narrative reviewed by the auditor, thresholds to be verified against current circulars), and the live link.

7. Final checks before submitting

Check	How
Voice clear throughout	Watch the full video with headphones
No long silences or overlaps	Skim the timeline; trim gaps
Length	About 6–10 minutes (follow your institute's limit)
Resolution	1080p MP4
File size	If the upload limit is small, upload to **YouTube (Unlisted)** or **Google Drive** (sharing set to *Anyone with the link*) and submit the link
Links work	The live app link opens: https://treasuryaudit360.lovable.app

8. Troubleshooting

Problem	Fix
Clipchamp or PowerPoint records no sound	**Settings → Privacy & security → Microphone**: allow access for apps and desktop apps; select the correct input in **Settings → System → Sound**

Problem	Fix
Voice too soft	Move the mic closer; in Clipchamp raise the clip volume; in Windows raise *Input volume*
Echo or room noise	Record in a smaller room with curtains or soft furnishing; use a headset mic
PowerPoint "Create a Video" is slow	Normal for 6 minutes of HD; keep PowerPoint open until the progress bar finishes
Game Bar does not open	**Settings → Gaming → Xbox Game Bar**: switch it on; or use Snipping Tool (Win + Shift + R)
Exported video has no voice (PowerPoint)	Choose **Use Recorded Timings and Narrations** in the export options
