ICAI AI LEVEL 2 · BATCH 98 · ERNAKULAM · CAPSTONE PROJECT

EditLog Auditor

Did the audit trail really run all year? A tool for reporting under Rule 11(g) of the Companies (Audit and Auditors) Rules, 2014 on TallyPrime books.

CA Kiran R

Tally and TallyPrime are trademarks of their respective owners. All brand names used here belong to their owners; this project is independent and not affiliated with or endorsed by them.

The audit trail is now a reporting duty, but it is hard to evidence

What the rule needs

- The books are kept in software with an edit log of every change, with date and time
- It operated all year, for every transaction, and cannot be disabled
- The audit trail is preserved as the statute requires
- The auditor reports on all of it under Rule 11(g), from FY 2023-24

What the auditor faces

- Tally shows the Edit Log as a screen report, and does not release it through its data connection
- One voucher type and one month at a time, by hand
- Every version, user and deletion has to be read and tested
- No standard working paper, so the evidence differs from file to file

EditLog Auditor takes the open Tally company to a reviewable file in six tabs

1 · Settings

Company, year, thresholds, the Tally link and folders

2 · Input

Pulls the vouchers and every Edit Log version from the open company

3 · Edit Log Findings

Ten tests: logging gaps, back-dating, deletions, generic user IDs

4 · Guided audit

ICAI steps and 12 controls, with suggested answers you confirm

5 · Reports

Draft wording, Annexure A, working papers, representation letter

6 · History

Save every check; reopen any company with its whole workspace

Built with AI, controlled by the auditor

How it was built

An AI coding assistant wrote the program; the CA supplied the domain: the ICAI guide, Tally screens and test files

Built in small iterations: each real Tally screenshot or error became the next fix

Automated checks run after every change

Guardrails and honest limits

Reads Tally and never changes it; never types a user name or password

Suggestions count only after the auditor confirms them

Every finding traces back to an Edit Log row in Annexure A

The opinion and the report stay the auditor’s own judgement

How to install it, and its honest limits

Install in three steps

Unzip EditLogAuditor_Setup from the GitHub folder

Double-click INSTALL.bat; it sets up Python and the app on the same PC as TallyPrime

Open EditLog Auditor from the desktop icon, then open the company in Tally and log in yourself

Limits to know

Edit Log extraction presses Tally’s keys, so it depends on Tally’s screen layout

Tried on a small number of files so far; more client files are needed

It prepares evidence and suggestions; the auditor’s judgement decides the report

What the auditor gets, and what comes next

On the audit file

Annexure A: every version, user, time and deleted voucher

12 control working papers, each with evidence from the data

Draft Rule 11(g) wording, the management representation letter and a suggested opinion

History: reopen any client’s check in one click
