

AUDA ESTATES Billing Desk

Project Summary

AUDA ESTATES Billing Desk is an offline desktop billing and accounting application developed to manage estate member records, monthly invoices, payment receipts, ledgers, exports, and backups. The project combines a Tkinter interface, a local SQLite database, Excel uploads, tax calculations, and PDF reporting in one operational system.

Project Objective

The project reduces manual work in estate billing by centralising member data, bill calculation, payment recording, and outstanding-balance tracking in a single local application.

Technology Used

Python is used for the application logic and Tkinter provides the desktop interface. SQLite stores the records locally. Excel templates support bulk data entry, and PDF generation supports printable billing documents and ledgers.

Main Features

Member Master management records plot area, water connection size, contact details, GST information, and active status. Invoices and receipts are created through Excel uploads. The application provides automatic refreshing after data changes, database backup, receipt reversal, and controlled deletion of records entered on or after a selected date.

Billing Logic

Yearly maintenance charges are calculated from plot area and the selected rate per square metre. Water charges are calculated at Rs. 5 per unit, subject to monthly minimums of Rs. 300, Rs. 350, and Rs. 400 for 20MM, 30MM, and 40MM connections. Interest penalty can be included. GST is calculated under SAC 999999 at 18 percent and invoice totals are rounded to the nearest rupee.

Reports and Outputs

The system maintains member-wise debit, credit, running balance, and outstanding amount. Individual or multiple member ledgers can be exported in PDF and Excel formats. Separate Excel templates are provided for Member Master, Invoice Creation, and Receipt Upload.

Project Outcome

The software provides a practical, offline billing solution for estate-management operations. It demonstrates database design, desktop user-interface development, Excel-based data processing, GST computation, ledger accounting, PDF output, and business workflow automation.

Input Template	Purpose
Member Master	Maintains member and connection details
Invoice Creation	Generates monthly invoices and ledger entries
Receipt Upload	Records verified payments and receipts
