

AUDA ESTATES Billing Software Build Prompt

Create a complete offline desktop billing application in a single runnable Python file for a property-estate organization named AUDA ESTATES. Use only dummy member names and data. Include a CMD launcher that automatically installs required Python packages and starts the software. Use a local SQLite database stored beside the Python file. Build a clean Tkinter desktop interface with automatic refresh after every data-changing action.

Required Features

- Secure login with default admin credentials.
- Member Master management with Excel import and sample template. Fields: code, name, plot, plot area in square metres, address, GSTIN, phone, active status, and 20MM, 30MM, or 40MM water connection.
- Invoice creation only through Excel upload. Invoice upload: member code, invoice number, invoice date, billing month, maintenance rate per square metre, past and present meter readings, and interest penalty.
- Professional A4 tax invoices with Yearly Maintenance Charges, Monthly Water Charges, Interest Penalty, SAC 999999, CGST 9 percent, SGST 9 percent, amount in words, and outstanding balance summary. Hide zero-value services and round totals to nearest rupee.
- Water charge of ₹5 per unit with monthly minimums of ₹300 for 20MM, ₹350 for 30MM, and ₹400 for 40MM.
- Receipt creation only through Excel upload. Receipt upload: member code, receipt number, receipt date, payment date, amount, payment mode, reference number, and description. Show two receipt copies on an A4 page.
- After invoice or receipt uploads, automatically create a properly formatted multi-page PDF batch using the invoice or receipt layout, not a ledger/text layout.
- Member ledger, receipt-only reversal, individual/all-member ledger exports in PDF and Excel, date-based data deletion with confirmation, and database backup.
- Use AUDA ESTATES branding only. Deliver Python file, CMD launcher, and Member Master, Invoice, and Receipt Excel templates together.
