

Annexure D: Submission of Capstone Project

All Participants are required to submit the Capstone Project on an individual basis within 10 Days of completing the Course. Participants shall develop their Capstone Project based on the learnings from all 5 days of the AICA Level 2 course.

Participants are requested to upload the project to **GitHub** and then fill the **Google Form** for evaluation.

Google form:- <https://forms.gle/cucnBGn34bVHFaxt9>

Step to Upload Your Project Folder to the AICA-Level-2-Projects Repository

Save your folder name as – AICA-L2-Batch-(XXX)-Name-Surname

Target repository: <https://github.com/aiinica/AICA-Level-2-Projects>

Overview of the Fork + Pull Request Workflow

1. Step 1: Fork — create a personal copy of aiinica/AICA-Level-2-Projects under your own GitHub account.
2. Step 2: Add your folder — put your project folder into your fork (via website upload or Git).
3. Step 3: Commit — save the changes in your fork with a message.
4. Step 4: Pull Request (PR) — ask the aiinica account to merge your changes into the original repository.
5. Step 5: Merge — the repository owner reviews and accepts your PR. Your folder now appears in the original repository.

Use this method if your project has relatively few files (under 100 per upload) and you do not need to keep commit history.

Step 1: Fork the Repository

- Log in to your GitHub account in the browser.

- Open <https://github.com/aiinica/AICA-Level-2-Projects>

- Click the 'Fork' button at the top-right of the page.
- On the 'Create a new fork' page, keep the default settings and click 'Create fork'.
- You will be redirected to your copy: <https://github.com/YOUR-USERNAME/AICA-Level-2-Projects>

Step 2: Upload Your Folder to Your Fork

GitHub's web uploader cannot create a folder directly, but there are two tricks:

Option A — Drag and drop the whole folder:

- In YOUR fork, click 'Add file' → 'Upload files'.

- Open your project folder's PARENT folder in File Explorer.
- Drag the entire project folder (not just the files inside it) onto the upload area. Modern browsers (Chrome/Edge) will keep the folder structure.

- Wait for all files to appear in the list.

Option B — Create the folder using a file path:

- In YOUR fork, click 'Add file' → 'Create new file'.
- In the filename box, type: MyProjectName/README.md — typing the '/' automatically creates the folder.
- Add some content, then click 'Commit changes'.
- Now open that folder and use 'Add file' → 'Upload files' to upload the rest of your files into it.

Note: If you have more than 100 files, upload them in batches, or use Method 2 (Git) instead.

Step 3: Commit the Upload

- Scroll down to the 'Commit changes' box.
- Write a short message, e.g., 'Add <Your Name> - <Project Name> project folder'.
- Keep 'Commit directly to the main branch' selected (this is your fork, so it is safe).
- Click 'Commit changes'.

Step 4: Open a Pull Request

- On your fork's main page, you will see a banner: 'This branch is X commits ahead of aiinica:main' — click 'Contribute' → 'Open pull request'.
- Alternatively, go to the 'Pull requests' tab and click 'New pull request'.
- Check the direction: base repository = aiinica/AICA-Level-2-Projects (base: main), head repository = YOUR-USERNAME/AICA-Level-2-Projects (compare: main).
- Give the PR a clear title, e.g., 'Add AICA Level 2 Project - <Your Name>'.
- In the description, briefly explain what your project does.
- Click 'Create pull request'.

Step 5: Wait for Merge

The owner of aiinica will receive your Pull Request. Once they review and click 'Merge', your folder becomes part of the official repository. You may receive review comments — you can update your fork and the PR updates automatically.
