

Upload Your Project Folder to the AICA-Level-2-Projects Repository

Target repository: <https://github.com/aiinica/AICA-Level-2-Projects>

This guide explains, step by step, how to contribute your entire project folder to a repository owned by another GitHub account (aiinica) using the Fork + Pull Request workflow. Two methods are covered: the website-only method (no software needed) and the Git command-line method (recommended for full folders).

Overview of the Fork + Pull Request Workflow

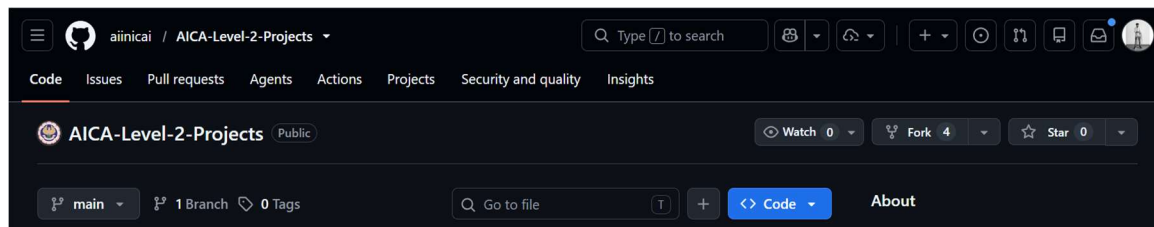

1. Step 1: Fork — create a personal copy of aiinica/AICA-Level-2-Projects under your own GitHub account.
2. Step 2: Add your folder — put your project folder into your fork (via website upload or Git).
3. Step 3: Commit — save the changes in your fork with a message.
4. Step 4: Pull Request (PR) — ask the aiinica account to merge your changes into the original repository.
5. Step 5: Merge — the repository owner reviews and accepts your PR. Your folder now appears in the original repository.

Method 1 — Website Only (No Git Installation Needed)

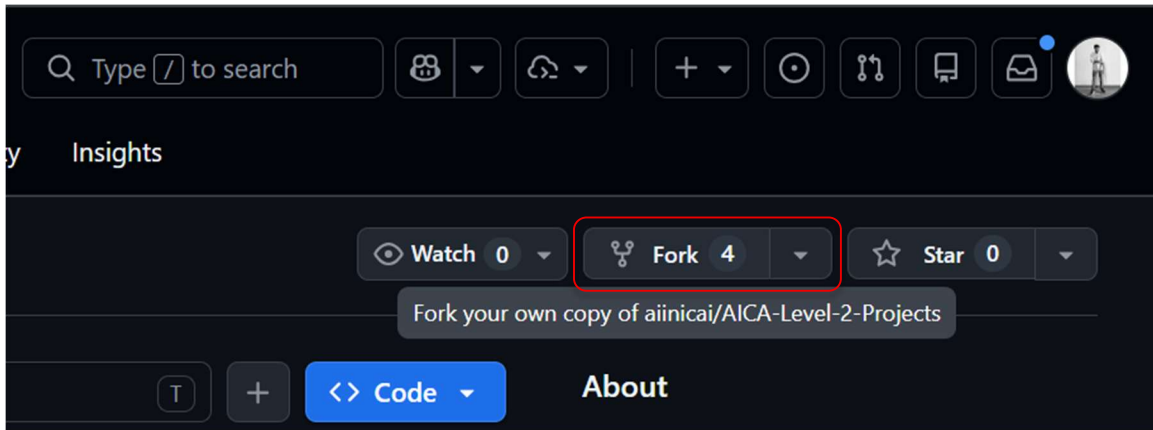

Use this method if your project has relatively few files (under 100 per upload) and you do not need to keep commit history.

Step 1: Fork the Repository

- Log in to your GitHub account in the browser.

- Open <https://github.com/aiinica/AICA-Level-2-Projects>

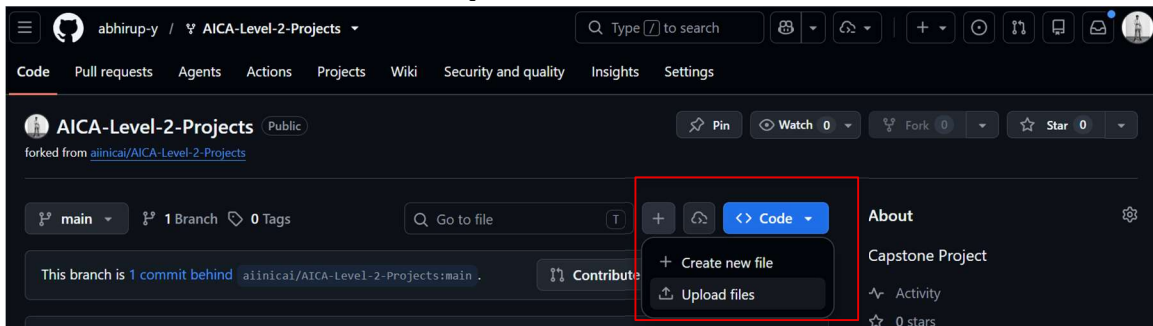

- Click the 'Fork' button at the top-right of the page.
- On the 'Create a new fork' page, keep the default settings and click 'Create fork'.
- You will be redirected to your copy: <https://github.com/YOUR-USERNAME/AICA-Level-2-Projects>

Step 2: Upload Your Folder to Your Fork

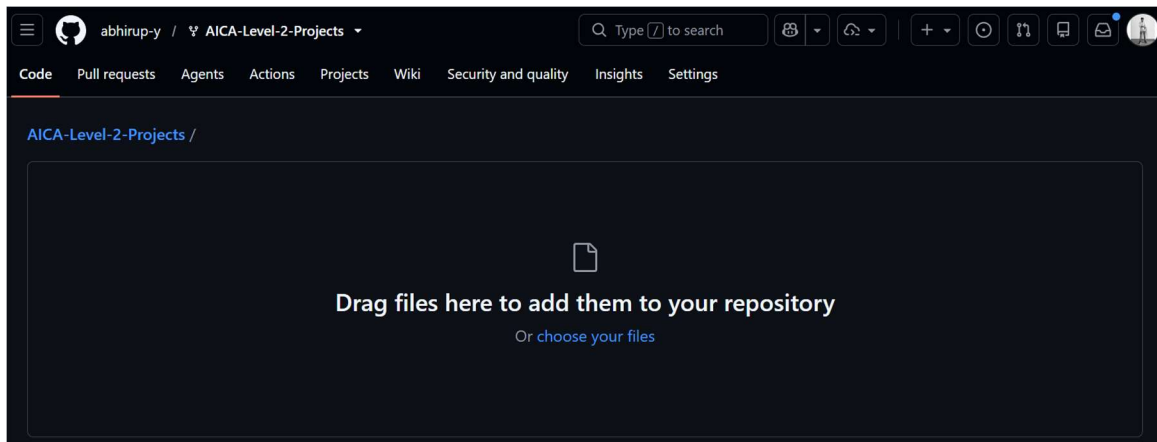

GitHub's web uploader cannot create a folder directly, but there are two tricks:

Option A — Drag and drop the whole folder:

- In YOUR fork, click 'Add file' → 'Upload files'.

- Open your project folder's PARENT folder in File Explorer.
- Drag the entire project folder (not just the files inside it) onto the upload area. Modern browsers (Chrome/Edge) will keep the folder structure.

- Wait for all files to appear in the list.

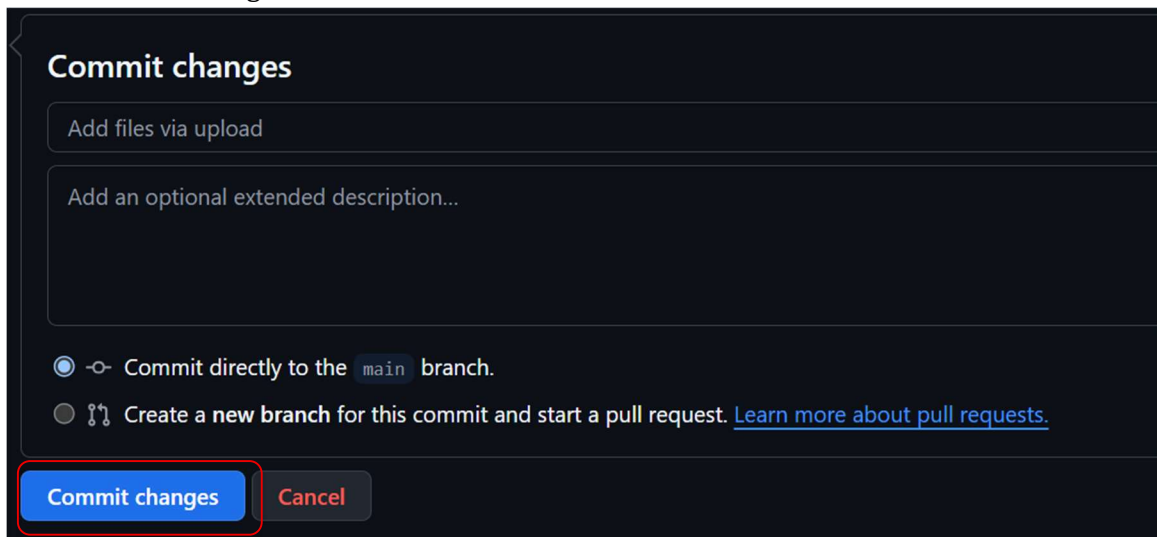

Option B — Create the folder using a file path:

- In YOUR fork, click 'Add file' → 'Create new file'.
- In the filename box, type: MyProjectName/README.md — typing the '/' automatically creates the folder.
- Add some content, then click 'Commit changes'.
- Now open that folder and use 'Add file' → 'Upload files' to upload the rest of your files into it.

Note: If you have more than 100 files, upload them in batches, or use Method 2 (Git) instead.

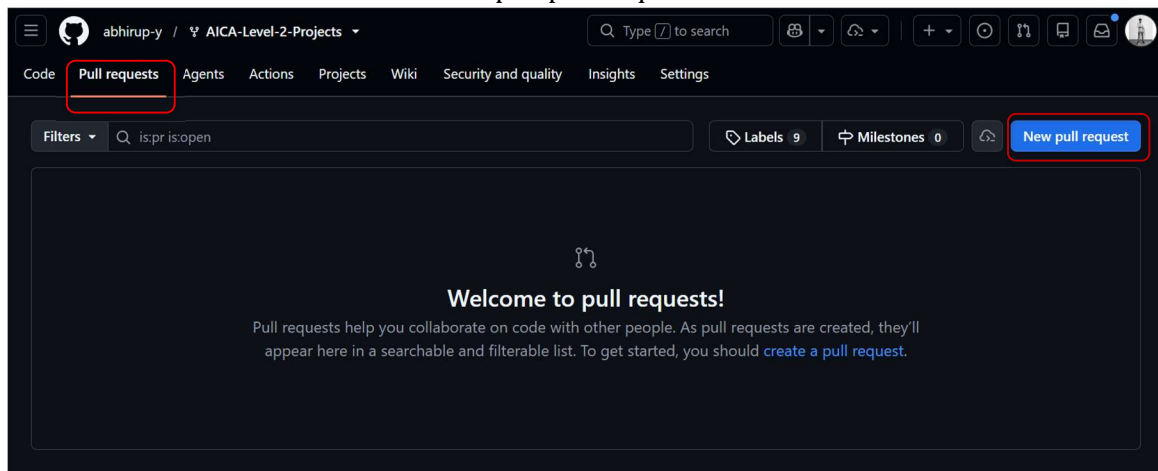

Step 3: Commit the Upload

- Scroll down to the 'Commit changes' box.
- Write a short message, e.g., 'Add <Your Name> - <Project Name> project folder'.
- Keep 'Commit directly to the main branch' selected (this is your fork, so it is safe).
- Click 'Commit changes'.

Step 4: Open a Pull Request

- On your fork's main page, you will see a banner: 'This branch is X commits ahead of aiinica:main' — click 'Contribute' → 'Open pull request'.

- Alternatively, go to the 'Pull requests' tab and click 'New pull request'.
- Check the direction: base repository = aiinica/AICA-Level-2-Projects (base: main), head repository = YOUR-USERNAME/AICA-Level-2-Projects (compare: main).
- Give the PR a clear title, e.g., 'Add AICA Level 2 Project - <Your Name>'.
- In the description, briefly explain what your project does.
- Click 'Create pull request'.

Step 5: Wait for Merge

The owner of aiinica will receive your Pull Request. Once they review and click 'Merge', your folder becomes part of the official repository. You may receive review comments — you can update your fork and the PR updates automatically.

Method 2 — Git Command Line (Recommended for Full Folders)

Use this method for large projects, many files, nested folders, or when you want to preserve everything exactly. Requires Git installed (download from <https://git-scm.com/downloads>).

Step 1: Fork the Repository (on the Website)

Same as Method 1, Step 1: open <https://github.com/aiinica/AICA-Level-2-Projects> and click 'Fork'.

Step 2: Clone YOUR Fork to Your Computer

Open a terminal (Command Prompt / PowerShell / Git Bash) and run:

```
git clone https://github.com/YOUR-USERNAME/AICA-Level-2-Projects.git
cd AICA-Level-2-Projects
```

Note: Replace YOUR-USERNAME with your actual GitHub username. Clone your fork, NOT the aiinica repository.

Step 3: Copy Your Project Folder Into the Clone

- Copy your entire project folder into the cloned AICA-Level-2-Projects folder.
- Example structure after copying: AICA-Level-2-Projects/MyProjectName/(all your files).
- Do NOT copy a .git folder from your own project into it — delete your project's inner .git folder if it has one, otherwise Git will treat it as a submodule and the files will not upload.

```
# Windows example (Command Prompt):
xcopy /E /I "C:\path\to\MyProjectName" "AICA-Level-2-Projects\MyProjectName"

# If your project folder contains a .git folder, remove it from the COPY:
rmdir /S /Q "AICA-Level-2-Projects\MyProjectName\.git"
```

Step 4: Commit and Push

```
git add .
git commit -m "Add MyProjectName - AICA Level 2 project"
git push origin main
```

Note: When pushing for the first time, Git will ask you to log in. Use your GitHub username and a Personal Access Token (PAT) as the password — GitHub no longer accepts account passwords for Git. Create a token at: GitHub → Settings → Developer settings → Personal access tokens → Generate new token (classic) → tick the 'repo' scope.

Step 5: Open the Pull Request

- Go to your fork on GitHub: <https://github.com/YOUR-USERNAME/AICA-Level-2-Projects>
- Click 'Contribute' → 'Open pull request'.

- Verify: base = aiinica/AICA-Level-2-Projects (main), compare = your fork (main).
- Add a title and description, then click 'Create pull request'.

Quick Checklist Before Submitting

- Project is inside ONE clearly named folder (e.g., YourName-ProjectTitle).
- The folder contains a README.md describing the project.
- No .git folder inside your project folder.
- No files above 100 MB (no giant datasets/model files).
- Committed to YOUR fork, then Pull Request opened against aiinica/AICA-Level-2-Projects.
- PR title and description clearly identify you and your project.
