14. Troubleshooting & FAQ	42

1. Getting Started

The Fixed Asset Register (FAR) runs from a single folder on one computer, using a launcher file called `run_far.bat`. That one computer acts as the server; everyone else on the same office network reaches the app through their own web browser — nothing needs to be installed on their machines.

1.1 Starting the app

1. On the computer that will host the app, open the `fixed_asset_register` folder.
2. Double-click `run_far.bat`.
3. A black command window opens and runs through some setup steps automatically. The very first time it is run, this includes creating a private Python environment and installing the required packages, which can take a few minutes — every run after that is fast.
4. Once you see the banner starting with "Starting the Fixed Asset Register server...", the app is ready and your own browser opens to it automatically.
5. Leave the black window open for as long as the app is being used — closing it, or pressing `Ctrl+C` inside it, stops the server for everyone. Minimising the window is fine.

Note: The first time you run it, Windows Firewall may ask whether to allow the app to accept network connections. Click "Allow access" — if you click "Cancel" instead, colleagues on the network will not be able to reach the app, though it will still work on the host computer itself.

1.2 Sharing it with others on your network

When the server starts, the command window prints two web addresses:

1. `http://localhost:8000/` — only works on the host computer itself.
2. `http://<a network address>:8000/` — works from any other computer, laptop, or phone connected to the same office Wi-Fi or network cable.

Share the second address with your colleagues (for example, by chat or email) so they can open it in their own browser and log in with their own username and password at the same time as you. The network address is detected automatically every time the app starts, so it is normal for it to change if the host computer later reconnects to a different network or gets a new address from the office router.

Note on security: Anyone outside your office network — for example, over the public internet — cannot reach the app this way. It is only reachable from devices on the same local network as the host computer.

1.3 Logging in

Open the address you were given and sign in with the username and password your administrator gave you. Each person should use their own account — the approval workflow (see chapter 9) depends on knowing who is who.

The screenshot shows the login interface for the Fixed Asset Register. At the top, a dark blue navigation bar contains the text "Fixed Asset Register" on the left and a circular theme icon followed by a "Log in" button on the right. The main content area is light blue and features a white login card in the center. The card has a dark blue square logo at the top, followed by the title "Fixed Asset Register" and the instruction "Sign in to continue to your register". Below this are two input fields: "Username" and "Password". A dark blue "Log in" button is positioned below the password field. At the bottom of the card, small text reads "Companies Act 2013 · Ind AS · CARO 2020 compliant register".

Figure 1. The login screen.

1.4 Choosing a theme

Click the theme icon in the top navigation bar to switch between light and dark colour schemes, and to pick an accent colour. This is a personal, per-browser preference — it does not change what colleagues see on their own screens.

Figure 2. The theme picker, opened from the top navigation bar.

1.5 The dashboard

After logging in you land on the dashboard, which summarises the register: total gross block and net book value, assets by class and by location, items pending your approval, and upcoming verification due-dates. Use the sidebar on the left to move between modules — it is organised the same way this guide is: Register, Lifecycle, Location, Governance, and Compliance.

Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.

Figure 3. The dashboard after logging in.

2. Asset Register

The Asset Register is the master list of every fixed asset the company owns or leases. In normal use, most assets enter the register automatically when a CWIP item is capitalised (chapter 3) — this chapter also covers direct entry for legacy or migrated assets.

2.1 Viewing the asset list

Open Register → Assets. Use the search box to find an asset by description or asset ID, and the status filter to narrow the list. Each asset's tag status and life status are shown as coloured badges. Tick the checkboxes next to one or more assets and click "Print QR labels for selected" to generate printable tag labels for them.

The screenshot displays the 'Fixed Asset Register' interface. The top navigation bar includes the title 'Fixed Asset Register', a user profile for 'Rohan Iyer' with roles 'Admin/CFO', and a 'Log out' button. A left sidebar lists various sections: REGISTER (Dashboard, Asset master, CWIP & capitalisation, Capex requisitions), LIFECYCLE (QR scan, Physical verification, Transfers, Disposal / write-off, Revaluation & impairment), LOCATION (Location map, Asset locator), GOVERNANCE (Approvals inbox, Bulk import / export), COMPLIANCE (Reports & exports), and ADMIN (Django admin). The main content area is titled 'Asset master' and features a search bar for 'description / asset ID', a status filter set to 'All statuses', and a 'Filter' button. A 'Bulk import/export' button is also present. Below these controls is a table with columns: ASSET ID, DESCRIPTION, CLASS, LOCATION, TAG, STATUS, and NBV. Two assets are listed: 1) AST-47D7A1B3, Factory workstation desk set, Furniture & fittings, Manufacturing Plant — Pune / Factory Building 1, Tagged, In use, ₹240,000; 2) AST-8351E077, Dell Latitude 5440 laptop, Computers & data processing units, Head Office — Mumbai / Building 1 / Floor 2 / Room 01 — IT, Tagged, In use, ₹85,000. A 'Print QR labels for selected' button is located below the table. The footer contains a disclaimer: 'Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.'

ASSET ID	DESCRIPTION	CLASS	LOCATION	TAG	STATUS	NBV
☐ AST-47D7A1B3	Factory workstation desk set	Furniture & fittings	Manufacturing Plant — Pune / Factory Building 1	Tagged	In use	₹240,000
☐ AST-8351E077	Dell Latitude 5440 laptop	Computers & data processing units	Head Office — Mumbai / Building 1 / Floor 2 / Room 01 — IT	Tagged	In use	₹85,000

Figure 4. The asset register list, with search and status filter.

2.2 The asset detail page

Click any Asset ID to open its detail page. It is organised into tabs: Overview (identity, cost, location, custody, insurance/AMC), Depreciation (Schedule II books and Income-tax block/WDV

side by side), Scan / movement history, Verification, Revaluation / impairment, and Documents. The stat tiles at the top always show gross block, accumulated depreciation, net book value, and tax WDV at a glance.

Figure 5. The asset detail page, showing the Overview tab.

2.3 Adding a new asset directly

Note: Prefer capitalising an asset from a CWIP item (chapter 3) wherever one exists — that path correctly accumulates freight, duty, installation and borrowing costs under Ind AS 16. Use direct entry only for legacy or migrated assets that already existed before this register was set up.

Open Register → Assets → New asset and complete the Entity, Vendor, Capitalised cost, and the remaining classification and location fields, then click "Create asset". Like any change to the register, a newly created or edited asset is not final by itself — it is automatically routed to the Approvals inbox (chapter 9) for a second person to sign off before it is treated as posted.

Figure 6. The new-asset direct-entry form.

3. Asset Lifecycle: Capex to Capitalisation

New assets normally follow a three-stage lifecycle: a Capex requisition is approved, costs are accumulated against a CWIP (Capital Work-in-Progress) item, and finally the item is capitalised into a live Asset Master record with an automatically generated QR tag.

3.1 Capex requisitions

Open Lifecycle → Capex requisitions. Click "Submit for approval" after completing Entity, Title, Justification, Estimated cost, Delegated authority threshold, and Board resolution reference. If the estimated cost exceeds the delegated authority threshold, the requisition is automatically flagged as requiring board approval (Section 179).

The screenshot displays the 'Fixed Asset Register' application interface. The top navigation bar includes the title 'Fixed Asset Register', a user profile for 'Rohan Iyer' with the role 'Admin/CFO', and a 'Log out' button. A left-hand sidebar lists various navigation options categorized under 'REGISTER', 'LIFECYCLE', 'LOCATION', 'GOVERNANCE', 'COMPLIANCE', and 'ADMIN'. The 'Capex requisitions' option is highlighted. The main content area is titled 'Capex requisitions (Sec. 179)' and features a table with columns: 'TITLE', 'ENTITY', 'ESTIMATED COST', 'BOARD APPROVAL?', 'STATUS', and 'REQUESTED BY'. The table currently shows 'No requisitions yet.' Below the table, a footer note states: 'Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.'

TITLE	ENTITY	ESTIMATED COST	BOARD APPROVAL?	STATUS	REQUESTED BY

Submit for approval

Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.

Figure 8. Submitting a new Capex requisition.

An approver reviews pending requisitions from the same list and clicks Approve or Reject next to each one. As with every approval step in this application, the person who submitted the requisition cannot also approve it.

3.2 Capital Work-in-Progress (CWIP)

Once a requisition is approved, open Lifecycle → CWIP → New CWIP item, link it to the requisition if there is one, and record the vendor, PO/GRN/Invoice references, and the cost breakdown — base, freight, duty, installation, borrowing, and other costs. Click "Create CWIP item". Costs can continue to be added to the item while it is Open.

Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.

Figure 10. A CWIP item's detail page, with its cost breakdown.

When the item is ready, open it and click "Capitalise this CWIP item". Complete the asset's classification (asset class, serial number, depreciation method, useful life, residual value, tax block/WDV rate), location, department and custodian, then click "Capitalise & generate QR tag". This creates the live Asset Master record and its QR tag in a single step.

4. QR Tagging & Scanning

Every capitalised asset gets a QR tag. Scanning it opens the QR / barcode scan screen (Lifecycle → QR scan), which is used for several different purposes — tag affixing, physical verification, transfers, maintenance logging, and disposal checks — all recorded in one shared scan-event log, distinguished only by the "Purpose" you select.

1. Click "Start camera scan" to use a phone or webcam camera, or type the asset ID (format AST-XXXXXXX) into the manual box and click "Look up".
2. The asset's description and details appear on the right. If the asset is marked Disposed, a warning banner reminds you that scanning it now is an exception, not a valid check-in.
3. Choose the Purpose of this scan (Tag affix & confirm, Physical verification, Transfer, Maintenance log, Disposal check, or General lookup).
4. Optionally choose "Confirm location node" so the scan can check the asset is where the register says it should be, add a Condition and Notes, and click "Submit scan".

The screenshot shows the 'Fixed Asset Register' interface. The top navigation bar is dark blue with the title 'Fixed Asset Register' on the left, a user profile 'Rohan Iyer Admin/CFO' in the center, and a 'Log out' button on the right. A left sidebar contains a menu with categories: REGISTER (Dashboard, Asset master, CWIP & capitalisation, Capex requisitions), LIFECYCLE (QR scan - highlighted, Physical verification, Transfers, Disposal / write-off, Revaluation & impairment), LOCATION (Location map, Asset locator), GOVERNANCE (Approvals inbox, Bulk import / export), COMPLIANCE (Reports & exports), and ADMIN (Django admin). The main content area is titled 'QR / barcode scan' and includes a subtitle: 'One code, every workflow — tag confirm, physical verification, transfer, maintenance log, or disposal check. Point your camera at the asset's tag, or type the asset ID manually.' Below this, there is a 'Start camera scan' button and a section for manual entry: '...or enter asset ID manually' with a text input field containing 'AST-XXXXXXX' and a 'Look up' button. At the bottom of the page, a small footer note reads: 'Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.'

Figure 11. The QR / barcode scan screen.

Note: If a scan's confirmed location does not match the register, it is not silently overwritten — it is raised as an exception in the Location mismatch queue (Lifecycle → QR scan → Mismatches), where it can be resolved by raising a transfer or dismissing it with a note. This trail is part of the evidence supporting CARO 3(i)(b).

5. Physical Verification

A verification cycle is a planned, rotational programme for physically checking that assets still exist where the register says they do — market practice, reflected in the app's own guidance text, is to achieve full coverage at least once every three years (CARO 3(i)(b)).

5.1 Planning a cycle

Open Lifecycle → Verification cycles and click "Plan a cycle". Give it a name (for example, "FY26 Zone A rotational verification"), an entity, an optional scope location (leave blank to cover the whole entity), and a start and target end date, then click "Create cycle".

The screenshot shows the 'Fixed Asset Register' application interface. The top navigation bar includes the title 'Fixed Asset Register', a user profile for 'Rohan Iyer' with 'Admin/CFO' role, and a 'Log out' button. A left-hand sidebar lists various navigation options categorized under 'REGISTER', 'LIFECYCLE', 'LOCATION', 'GOVERNANCE', 'COMPLIANCE', and 'ADMIN'. The 'Physical verification' option under the 'LIFECYCLE' section is highlighted. The main content area is titled 'Physical verification cycles' and includes a 'Plan a cycle' button. Below the title, a text box states: 'Rotational programme — market practice is full coverage at least once every 3 years (CARO 3(i)(b)).'. A table with columns 'NAME', 'ENTITY', 'SCOPE', 'START', 'TARGET END', 'STATUS', and 'COVERAGE' is displayed, showing 'No cycles planned yet.'.

NAME	ENTITY	SCOPE	START	TARGET END	STATUS	COVERAGE
No cycles planned yet.						

Figure 12. The verification cycles list — coverage percentage appears per cycle once one is planned.

Figure 13. Planning a new verification cycle.

The screenshot shows the 'Fixed Asset Register' application interface. At the top, a dark blue header contains the title 'Fixed Asset Register' on the left and a user profile 'Rohan Iyer' with roles 'Admin/CFO' and a 'Log out' button on the right. A left-hand sidebar lists various navigation categories: REGISTER (Dashboard, Asset master, CWIP & capitalisation, Capex requisitions), LIFECYCLE (QR scan, Physical verification, Transfers, Disposal / write-off, Revaluation & impairment), LOCATION (Location map, Asset locator), GOVERNANCE (Approvals inbox, Bulk import / export), COMPLIANCE (Reports & exports), and ADMIN (Django admin). The 'Physical verification' option is highlighted. The main content area is titled 'Plan a verification cycle' and contains a form with the following fields: 'Entity' (Sample Manufacturing Industries Ltd.), 'Name' (FY 2026-27 Q2 rotational verification — Mu), 'Scope location (optional)' (Whole entity), 'Start date' (09/01/2026), and 'Target end date' (09/30/2026). Each date field has a calendar icon. A dark blue 'Create cycle' button is positioned below the start date field. At the bottom of the page, a small footer note states: 'Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.'

Figure 14. The cycle form, filled in and ready to submit.

5.2 Working through a cycle

Open the cycle to see every asset still pending verification within its scope, alongside already-completed records. For each pending asset, choose a Condition (Good, Fair, Damaged, or Not found), add any discrepancy notes, and click "Mark verified". The coverage percentage on the cycle updates as records are completed. Verification can also be performed directly from the QR scan screen (chapter 4) using the "Physical verification" purpose.

Figure 20. The transfer request just after it is submitted, pending sign-off.

6.2 Signing off a transfer

Once the asset has physically arrived, click "Sign off" next to the pending transfer. This is the moment the asset's location, custodian, and department are actually updated on the register — a transfer that is requested but never signed off leaves the register unchanged, by design.

Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.

Figure 21. The transfer after sign-off — the asset's location has now updated.

Note: A transfer can also be raised automatically from the Location mismatch queue when a scan finds an asset somewhere other than its registered location.

7. Disposal, Write-off & Sale

Disposing of an asset — by sale, scrap, write-off, or damage/destruction — goes through the same maker-checker approval used elsewhere in the app. The underlying asset record is never deleted; it is retained and its life status changes to Disposed once the request is approved.

Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.

Figure 23. Submitting a new disposal request.

Profit or loss on disposal is calculated automatically as sale/scrap value minus disposal costs, minus the asset's net book value at the time of the request. If the amount is material relative to total net PP&E;, it is flagged for Section 180 and the approver is asked for a board or shareholder resolution reference before approving.

8. Revaluation & Impairment

8.1 Recording a revaluation

Open Lifecycle → Revaluation → Record revaluation. Section 247 requires the valuation to be carried out by a Registered Valuer, so the form asks for the valuer's name and registration number alongside the valuation date, methodology, fair value, and carrying value before revaluation. Click "Record & route for approval".

Revaluation recorded and routed for approval.

Revaluation & impairment

ASSET	VALUER	DATE	FAIR VALUE	SURPLUS/DEFICIT >10%?	STATUS
AST-8351E077	L. C. Gupta & Associates (IBBI/RV/2019/00123)	Aug. 1, 2026	₹72,000.00	₹4,000.00 No	Pending

Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.

Figure 27. The revaluation just after submission, pending approval.

The surplus or deficit and the percentage movement are calculated automatically. A movement of 10% or more automatically triggers the CARO 3(i)(d) disclosure flag shown against the record. Like other requests, it must be approved by someone other than whoever recorded it.

8.2 Impairment (Ind AS 36)

Impairment is assessed per asset, from the "Revaluation / impairment" tab on that asset's detail page (chapter 2). An approver or Admin/CFO user enters the recoverable amount, ticks whether impairment indicators are present, adds notes, and clicks "Run Ind AS 36 impairment check".

9. Approvals (Maker-Checker)

Almost every change of consequence in this application — creating or editing an asset, capitalising a CWIP item, a disposal, a transfer, a revaluation — is routed through a maker-checker control before it is treated as final. The rule is strict and enforced by the system itself: the person who approves a request can never be the same person who made it.

Open Governance → Approvals inbox to see every request awaiting a decision, with the action type, a summary, who requested it, and when. Add an optional comment and click Approve or Reject. Some modules — Capex, Disposal, and Revaluation — also show their own decide buttons directly on their list pages; both routes use the same underlying approval check.

The screenshot displays the 'Fixed Asset Register' application interface. The top navigation bar includes the title 'Fixed Asset Register', a user profile for 'Rohan Iyer' with the role 'Admin/CFO', and a 'Log out' button. The left sidebar contains a menu with categories: REGISTER (Dashboard, Asset master, CWIP & capitalisation, Capex requisitions), LIFECYCLE (QR scan, Physical verification, Transfers, Disposal / write-off, Revaluation & impairment), LOCATION (Location map, Asset locator), GOVERNANCE (Approvals inbox, Bulk import / export), COMPLIANCE (Reports & exports), and ADMIN (Django admin). The 'Approvals inbox' is currently selected. The main content area is titled 'Approvals inbox' and includes a note: 'Maker-checker: the approver must be a different user from whoever made the request.' Below this is a table with headers: ACTION, SUMMARY, REQUESTED BY, WHEN, and DECIDE. The table body contains the message 'Inbox is empty.' at the bottom.

ACTION	SUMMARY	REQUESTED BY	WHEN	DECIDE
Inbox is empty.

Search "where is AST-04821" by asset ID, description, serial number, or location.

Asset ID, description, or location...

Search

Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.

Figure 32. The asset locator, searching by asset ID, description, or location.

11. Bulk Import & Export

Open Register → Assets → Bulk import/export to migrate an existing asset register without re-keying every record by hand, or to take a full extract of the current register.

1. Click "Download CSV template" to get the exact column headings the importer expects.
2. Fill in the template in a spreadsheet program and save it as CSV.
3. Choose the file and click "Import". A summary shows how many assets were created; any rows that failed are listed individually so they can be corrected and re-imported.
4. Click "Download CSV export" at any time for a full export of the current register, including net book value, status, and custodian for every asset.

Figure 33. The bulk import / export screen.

12. Compliance & Reports

Open Compliance → Reports and choose an entity and financial year to generate reports on demand — nothing here needs to be prepared manually.

1. Schedule III PP&E; schedule — the opening/additions/disposals/closing roll-forward required under Schedule III, viewable on screen or downloadable as CSV.
2. Ind AS 16 para 73(e) roll-forward — the same idea, in the format required for Ind AS 16 note disclosures, including revaluation and impairment movements.
3. CARO 3(i) evidence pack — records completeness and verification coverage percentages, immovable-property title-deed exceptions, the revaluation register, verification cycle status, and the Benami Transactions (Prohibition) Act declaration.
4. Physical verification working papers and an XBRL-ready export (a data-readiness export for AOC-4 XBRL filing, not a signed instance document) are also available as CSV downloads.

The screenshot shows the 'Fixed Asset Register' interface. The top header includes the title 'Fixed Asset Register', a user profile for 'Rohan Iyer' with roles 'Admin/CFO', and a 'Log out' button. A left sidebar contains a navigation menu with categories: REGISTER (Dashboard, Asset master, CWIP & capitalisation, Capex requisitions), LIFECYCLE (QR scan, Physical verification, Transfers, Disposal / write-off, Revaluation & impairment), LOCATION (Location map, Asset locator), GOVERNANCE (Approvals inbox, Bulk import / export), COMPLIANCE (Reports & exports - highlighted), and ADMIN (Django admin). The main content area is titled 'Compliance outputs, generated on demand' and features filters for 'Sample Manufacturing Industries Ltd.' and 'FY 2026-27'. It displays six report cards: 1. 'Schedule III PP&E schedule' (Gross block, additions, disposals, accumulated depreciation, net block — financial-statement note format) with 'View' and 'Download CSV' buttons. 2. 'Ind AS 16 para 73(e) roll-forward' (Full movement reconciliation for the notes to accounts, including revaluation and impairment) with 'View' and 'Download CSV' buttons. 3. 'CARO 3(i) evidence pack' (Records-completeness %, verification coverage %, title-deed status, revaluation register, Benami declaration) with a 'View' button. 4. 'Physical verification working papers' (Exportable scan logs and discrepancy resolution notes for the auditor's file) with a 'Download CSV' button. 5. 'XBRL-ready export' (PP&E note data structured for AOC-4 XBRL filing (data-readiness export, not a signed instance document)) with a 'Download CSV' button. 6. 'Section 188 related-party flag' (Related-party vendors and disposal buyers are flagged automatically wherever they appear — see the Asset master and Disposal list) with a 'Go to Asset master' button. A footer note states: 'Fixed Asset Register — built for Companies Act 2013 · Ind AS · CARO 2020 compliance. Reference-only tooling; confirm statutory positions with your auditor / PCS.'

Figure 34. The compliance reports home screen.

Note: Section 188 related-party disposal flags are not a separate report — they appear inline on the disposal list and the asset detail page wherever they apply.

13. Roles & Permissions

Every user belongs to one of five roles, which controls what they can see and do. Ask your administrator if you need a different role.

Role	Can do
Data Entry	Add and edit assets, CWIP items, Capex requisitions, vendors, documents, transfer and disposal requests. Read-only on asset classes, locations, entities.
Verifier	Record QR scans and physical verification results, run verification cycles, log maintenance. Read-only on the asset register and locations.
Approver	Decide (approve/reject) Capex, disposal, transfer, and revaluation requests, and run impairment checks. Read-only elsewhere.
Admin / CFO	Full access across every part of the Fixed Asset Register.
Auditor (Read-only)	View-only access across almost everything, including compliance records — cannot create, edit, or approve anything.

A rule that applies to every role except Auditor: the maker-checker control (chapter 9) means the same person can never both create/submit a request and approve it, regardless of which role they hold.

14. Troubleshooting & FAQ

Q. The black window closed / I closed it by accident.

A. The server stops as soon as that window closes, and no one can reach the app until it is started again. Just double-click `run_far.bat` again — nothing is lost, since all data is saved to the database as you work, not to that window.

Q. Colleagues can't reach the app from their computer.

A. Check the network address printed in the black window matches what you shared, confirm "Allow access" was clicked on any Windows Firewall prompt when the app first started, and confirm their computer is on the same office network (not a guest Wi-Fi or a different office) as the host computer.

Q. The network address changed since last time.

A. This is normal — it is detected fresh every time the app starts and can change if the host computer reconnects to the network or the office router assigns it a new address. Re-share the newly printed address.

Q. QR codes printed earlier stopped opening correctly.

A. A QR tag encodes the network address that was active on the computer at the moment it was capitalised or printed. If that address later changes permanently (for example, the host computer moved to a different network), tags printed under the old address may need to be reprinted.

Q. I can't approve my own request.

A. This is expected, not a fault — maker-checker requires a second person to approve. Ask a colleague with the Approver or Admin/CFO role to review it in the Approvals inbox.

Q. The app is slow with many people using it at once.

A. The host computer's own performance and network connection are shared by everyone using the app at the same time — a computer with a wired network connection, and not otherwise doing something intensive, will generally serve several concurrent users comfortably.

Q. Do I need to keep re-running `run_far.bat` during the day?

A. No — start it once at the beginning of the day and leave the window open. It only needs to be started again if it was closed, or after restarting the host computer.
